

Python programming language.

18/06/2026 08:13AM

Concept of programming :-

Software (programs) Rules the hardware (The physical machine).

$\rightarrow$ A program is just a seq of Instruction telling a computer what to do.

$\rightarrow$ software Refers to the collection of Instruction, Data, & programs, code that enable a computer or Hardware provide the platform on which software operates.

$\rightarrow$ the process of creating software is called programming.

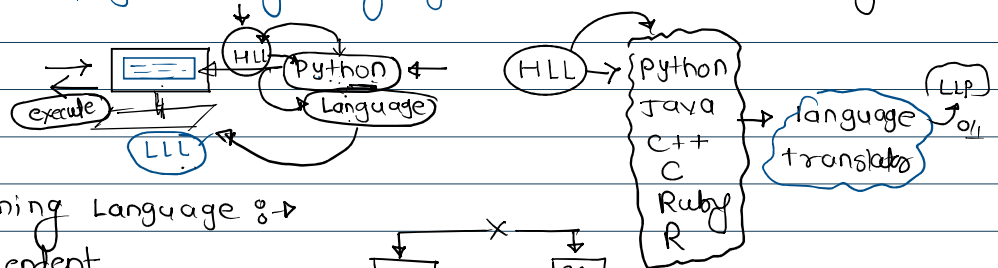

$\rightarrow$ The process of creating software by the specific Instruction (Python) is called code.

Language is called code of Instruction.

* Types of programming Language :-

1) High level programming language. $\Rightarrow$ Human understanding L.

2) Low level programming language. $\Rightarrow$ M/C understanding L.

1) Low level programming Language :-

$\rightarrow$ M/C dependent

$\rightarrow$ Hardware Interactive

$\rightarrow$ Difficult to write program `010011101`

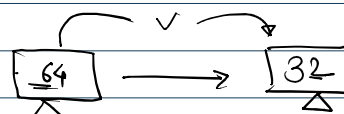

$\rightarrow$ Fast in execution.

2) High level programming Language :-

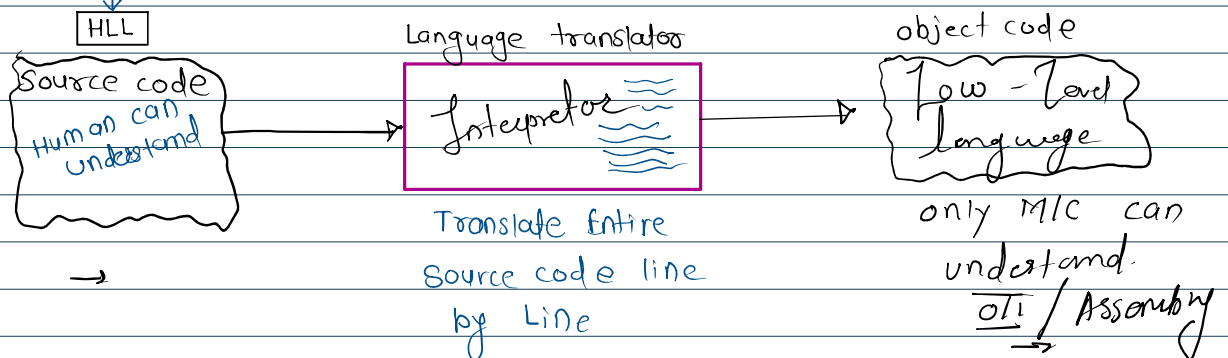

- MLC Independent
- Easy to write a code
- slow in execution

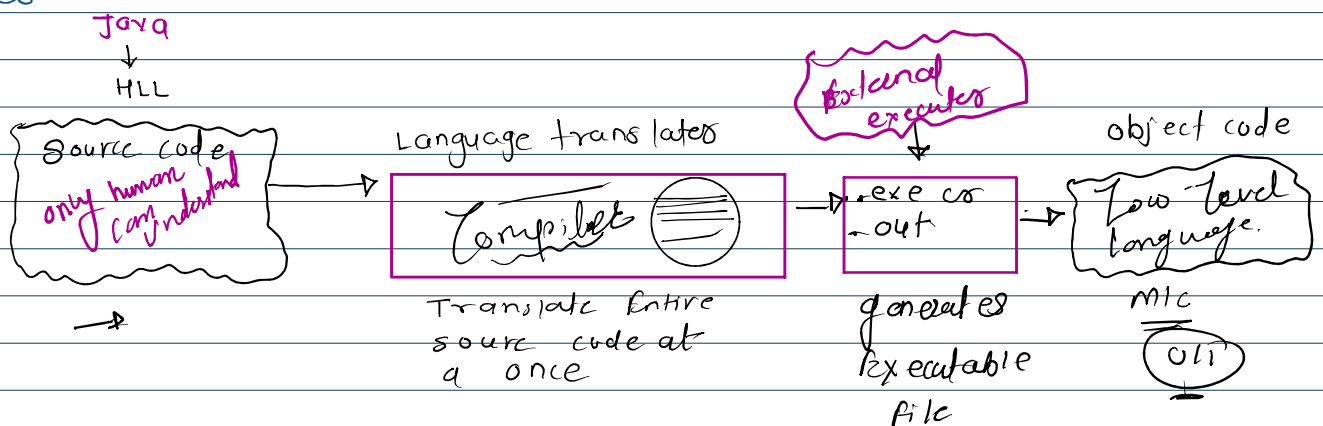

eg C, C++, Python, Java, Ruby, ...

✓ Interpreter :- Python

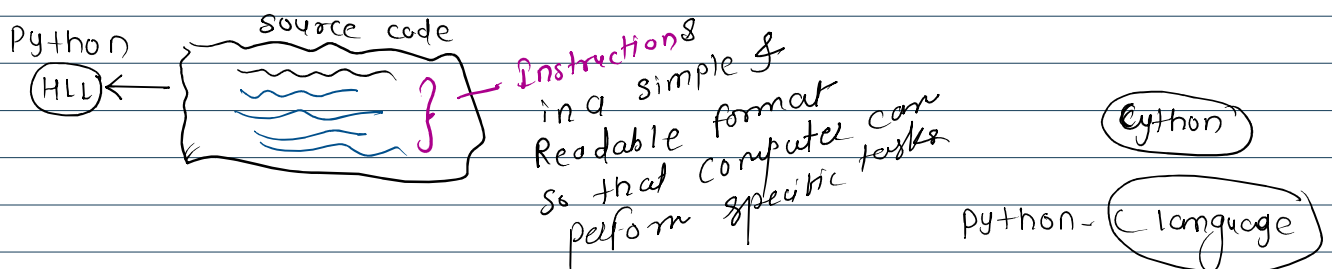

✓ Compiler

Python :-

Python is a High-level Interpreted, general purpose programming Language used for developing software, website, automation scripts, Data Analysis, Artificial Intelligence (AI), Machine Learning, Deep Learning, Data sci, cyber security & many other applications.

Dec
- Guido van Rossum → 1989 (started developing python)

v

Dec 1

- Guido van Rossum $\Rightarrow$ 1989 (started developing python)
20feb 1991 $\rightarrow$ (0.9.0 first version) $\rightarrow$ 3.13.2 $\rightarrow$ 3.12.2
python communities $\downarrow$ (classes + functⁿ + Exception Handling
Module) $\rightarrow$ C language
2000 - python (2.0)
List comp + garbage collect + unific suppr
2008 - python (3.0) $\rightarrow$ 3.6 - 17

~~Python~~ $\rightarrow$ Monty python's flying circus.
