

```
In [4]: print('Hello word!')
```

Hello word!

Feature Of Python :

1. Simple and easy to learn :

Python Syntax is just like an english language

```
In [6]: age=int(input('Emnter your age ='))
if age>18:
    print('It is applicable')
else:
    print('Not applicable')
```

It is applicable

2. It is HIGH Level Language :

Programmers do not to manage memory manually

LLL :

Binary 0/1

assimby ...AXDEL01

HLL:

Python --- interpreter

java ----- interpreter + compiler

..... and so on

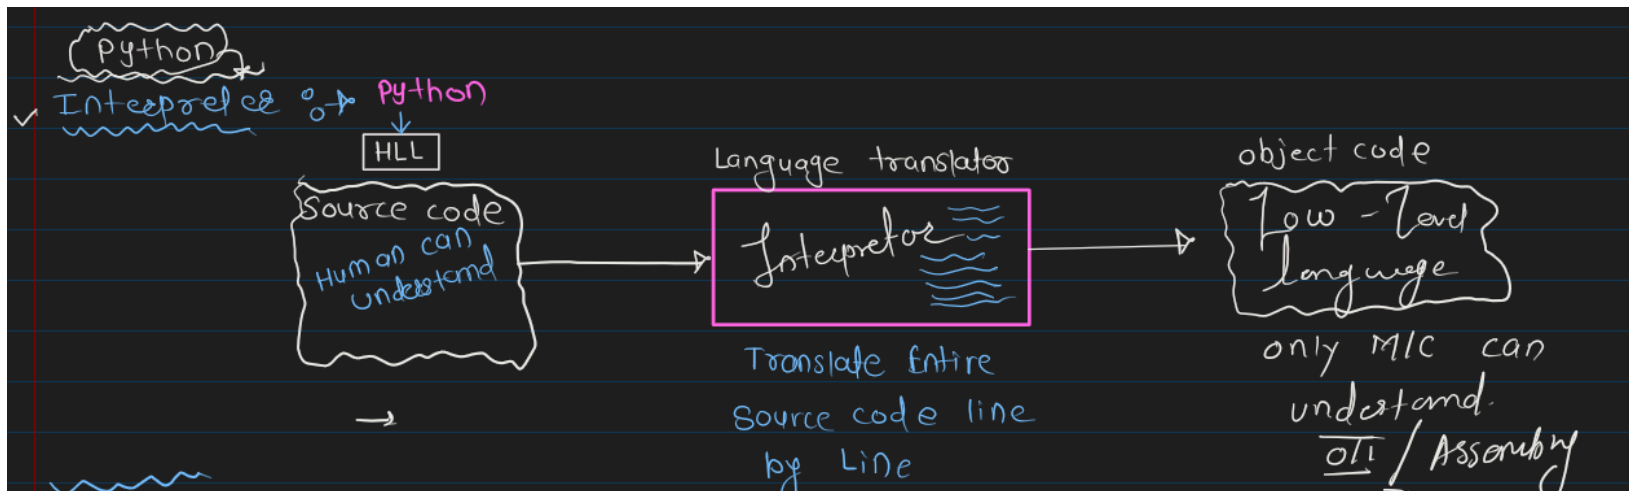

```
In [7]: name='Shiv'
print(name)
```

Shiv

```
In [8]: print(f'my name is {name}')
```

my name is Shiv

3. Python --- interpreter PL:

Python code execute line by line.

Source code ---> High Level Language (Python)

-
-
-

Interpreter ---> Language Translator

-
-
-

OutPut

```
In [13]: age=18
print(age)
if age>'18':
    print('It is applicable')
else:
    print('Not applicable')
```

```

-----
TypeError                                Traceback (most recent call last)
Cell In[13], line 3
      1 age=18
      2 print(age)
----> 3 if age>'18':
      4     print('It is applicable')
      5 else:

TypeError: '>' not supported between instances of 'int' and 'str'

```

Note : Each line execute sequentially Advantages: Easy debugging Faster development

4. It is Object Oriented Language and PPL :

Python

1. PPL
2. OOP

5. Portable language :

Write once and run anywhere.
without changing the source code

Python ____SourceCode

Linux ---> ok
macOS ---> ok
Windows ---> ok

7. It is an Open Source :

Python is Free
--> No License cost.
--> Python community support.

8. Extensive Library support :

Python has thousand of Libraries.

Data Analysis:

Numpy

Pandas

Visualization :

Matplotlib

seaborn

Machine Learning :

Scikit_learn

Deep Learning :

Tensorflow

PyTorch
